# Omar Ibrahim

Product Manager | AI Products and Workflow Automation
Hong Kong | +852 59393797 | os1991ai@gmail.com | LinkedIn

Product manager with a background in game design and development. At MeeOpp since 2021, with broader AI product ownership since 2025. Combines prompt design, pedagogy validation and hands-on, AI-assisted delivery with experience hiring and supervising a game artist.

## Experience

### Meego Technologies (MeeOpp), Hong Kong — Aug 2021 to Present

AI product ownership since 2025; earlier game design and development

- Led prompt design and pedagogy validation for AI Quick-Drill (AI Bitesize squad), and directed engineering delivery. Reduced exercise-creation time from approximately 5 to 1.5 hours, including human review; generated 2,400 curriculum-aligned questions across three languages.
- Led the design and AI-assisted build of a tiered curriculum system so one course could serve multiple ability levels, with placement and teacher/admin tools. Followed through after rollout, including diagnosing and correcting placements for 29 students.
- Extended AI question generation to interpret figures in uploaded teaching material, with teacher-controlled reuse of source figures and creation of illustrative charts. Added separate LLM checks for chart validity and whether questions depend on the figure.
- Built a document-driven course planner that converts school schedules into reviewable course plans; iterated with pedagogy and customer-success teams to handle different school requirements.
- Built the delivery layer for personalised practice using approved questions and learner skill evidence. Iterated content selection, readiness checks and admin explanations while preserving assigned content and individual marks.
- Added AI grading validation against original marking instructions, score boundaries and per-skill evidence, blocking automatic adoption when checks fail. Added a repair workflow that rechecks failed cases before accepting changes.
- Built teacher self-service tools and an AI-generated professor reporting suite, moving class-account management, submission tracking and recurring reports from manual workflows into the app.
- Planned, designed and developed MeeOpp games; hired and supervised a game artist. Led the Unity-to-Phaser/TypeScript migration, reducing build size from 23.5 MB to 2.5 MB and enabling iPad and mobile play.

### Educational Technology Developer — Jan 2019 to Aug 2021

University of Hong Kong (TELI) — Hong Kong

- Designed and developed interactive educational applications aligned with faculty pedagogical goals, including AR/VR experiences, AI chat interactions and live data syncing.
- Delivered 5+ apps adopted across HKU departments, covering gesture recognition, simulation tools and collaborative learning experiences.

### Game Developer — 2014 to 2018

TantumSoft, Gimzat, Fixed Solutions, Nilecode — Egypt

- Developed gameplay systems, interactive prototypes and modular tools for educational and entertainment applications across multiple studios.

## Skills

**AI and Product:** Prompt design and tuning, LLM integration (OpenAI, Claude, Gemini), multimodal question generation, LLM evaluation workflows, AI-assisted prototyping and delivery (Claude Code, Codex), product scoping, roadmaps, PRDs, Amplitude

**Technical:** TypeScript, JavaScript, Node.js, Next.js, Prisma, HTML/CSS, C#, Unity, Phaser

**Tools:** n8n, Inngest, Playwright, Vitest, Git, GitHub, Jira, Confluence, Shopify, Stripe, Firebase

## Education

**B.Sc. Computer Science** | Integrated Thebes Academy | 2008 to 2012
Class Rank: 1st | GPA: 3.87/4.0
